

TECNOLÓGICO NACIONAL DE MÉXICO
INSTITUTO TECNOLÓGICO DE SALTILLO

Materia: Cómputo en la nube

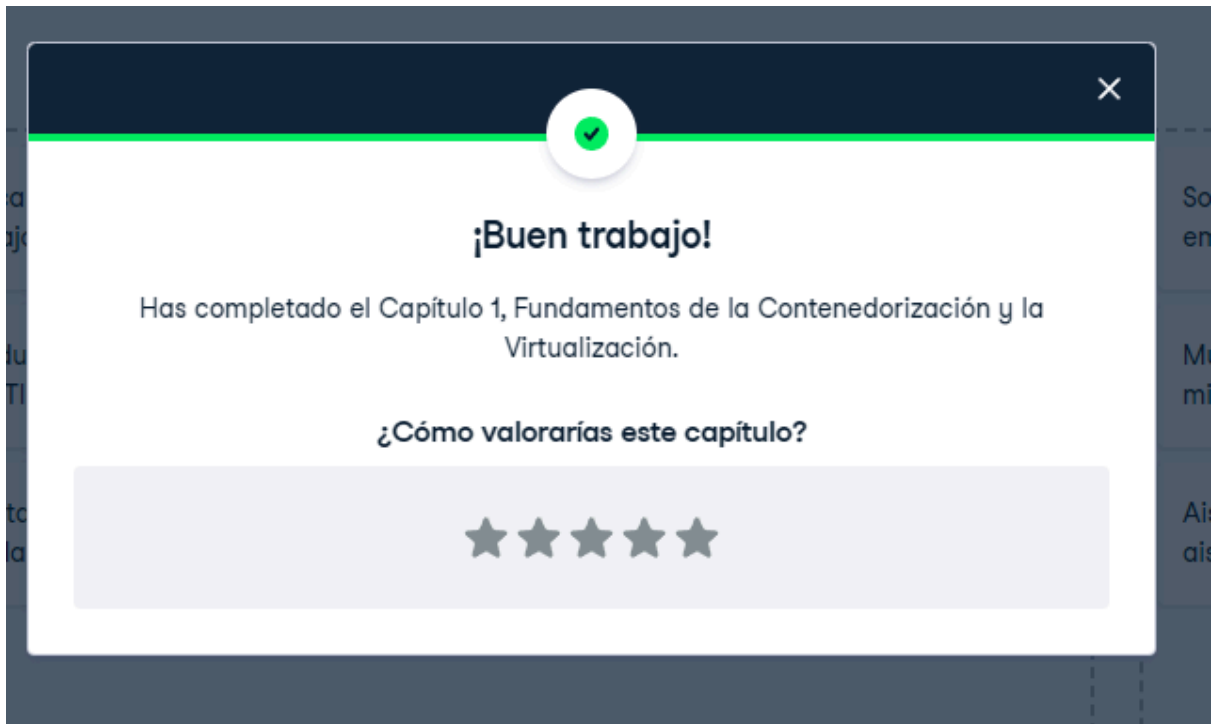

Hora clase: 7:00am - 8:00am

Actividad 5.3 Realizar curso de “Conceptos de
Contenerización y Virtualización”

Cesar Gabriel Rodriguez Aguilera

No. Control: 21051501

Fecha: 21/04/2026

1 Foundations of Containerization and Virtualization Available

100%

Explore the concept of virtualization, its benefits, and the emergence of containerization as a lightweight alternative. You will then delve into the key differences between containers and virtual machines, enabling you to determine the ideal solution for your needs.

Description

Heard of Docker, containers, Kubernetes, and VMs but not sure what they mean? This course provides foundational knowledge in containerization and virtualization to enhance your modern software development skills. You'll learn to distinguish between containers and virtual machines, understand Docker and Kubernetes, read Dockerfiles, and run your first containerized application. By the end, you'll have the essential knowledge to dive deeper into Docker and Kubernetes and make informed architectural
